

CS 7295-01 Special Topics on Visualization in Network Science

Professor Cody Dunne

<https://codydunne.github.io/cs7295-f17/>

c.dunne@northeastern.edu

Logistics

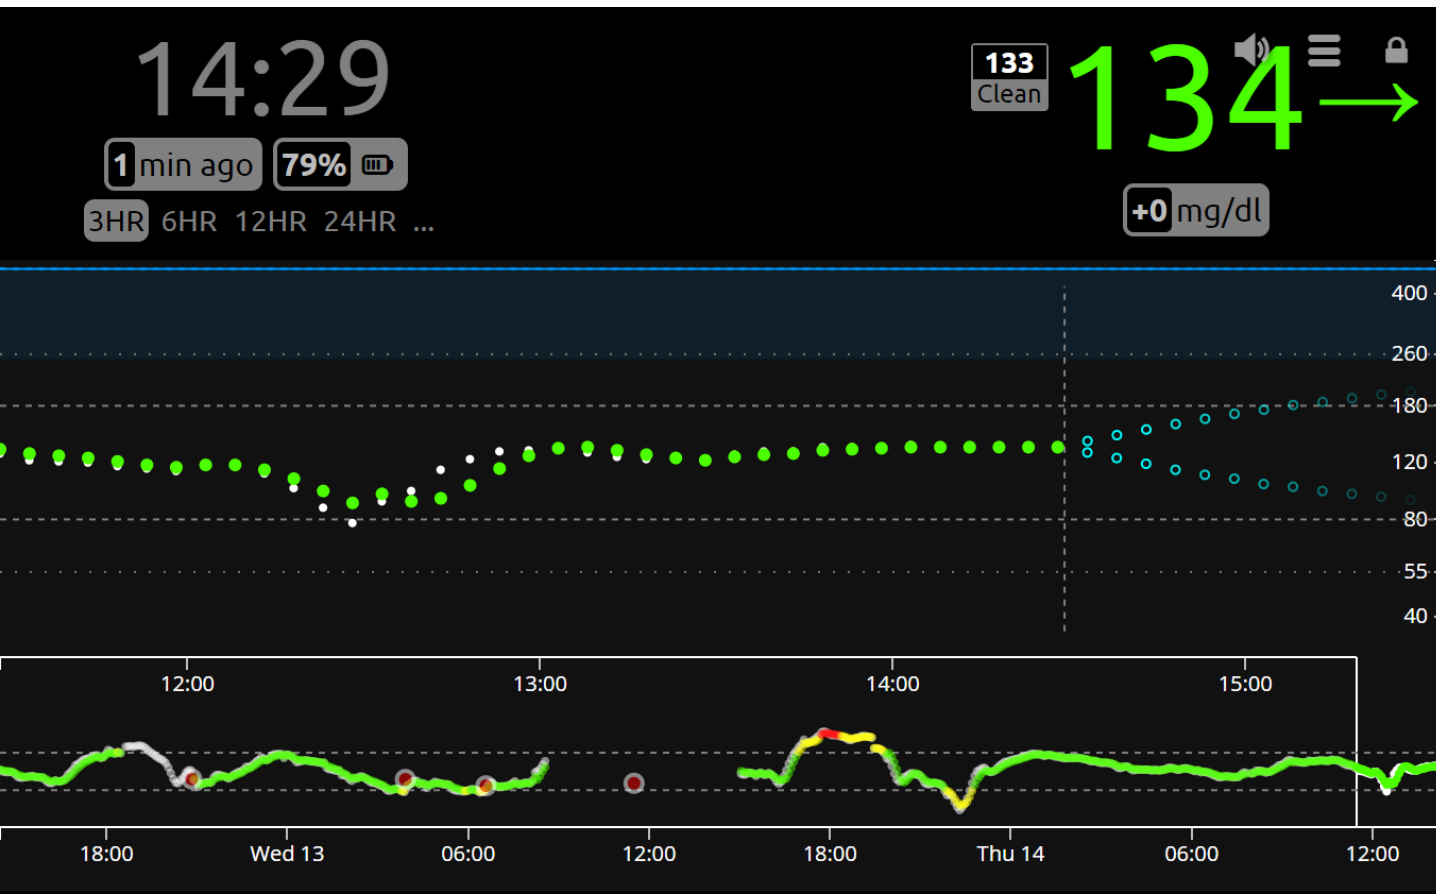

Logistics

- Announcements, questions on Piazza
 - Secondary: Office hours, email
- Everyone has a homework 2 team?
- Numbering of HW, project assignments vs. numbering of reading discussions, quizzes
- Grade components updated on syllabus, homework, and project pages
- Grades entered in Blackboard throughout semester

<https://codydunne.github.io/cs7295-f17/>

Speak your name!

Grad. Cert. in Digital Humanities

Can complete in addition to your degree. It's an opportunity for you to study with the NULab's interdisciplinary faculty and to join Northeastern's rapidly-growing digital humanities community.

- Students take 12 semester hours total:
 - three semesters of a one-hour project seminar workshop (NULab project seminar (INSH 7910) has fall openings)
 - introduction to digital humanities class
 - two electives
- Final project, part of a thesis/dissertation or part of on a larger DH project, e.g.:
 - Women Writers Project <http://wwp.northeastern.edu/>
 - Viral Texts <http://viraltxts.northeastern.edu/>
- Reach out to Sarah Connell sa.connell@northeastern.edu, assistant director of NULab <http://www.northeastern.edu/nulab>

Upcoming Deadlines

<https://codydunne.github.io/cs7295-f17/schedule/>

Quiz!

Graph \approx Network

Node \approx Vertex \approx Entity

Edge \approx Link \approx Relationship

Node 1	Node 2
Alice	Bob
Alice	Cathy
Cathy	Alice

Topology Aggregation

Navlakha et al., 2008

Figure 1: The two part graph representation. The LHS shows the original graph, while the RHS contains the graph summary (S), corrections (C), and the supernode mapping.

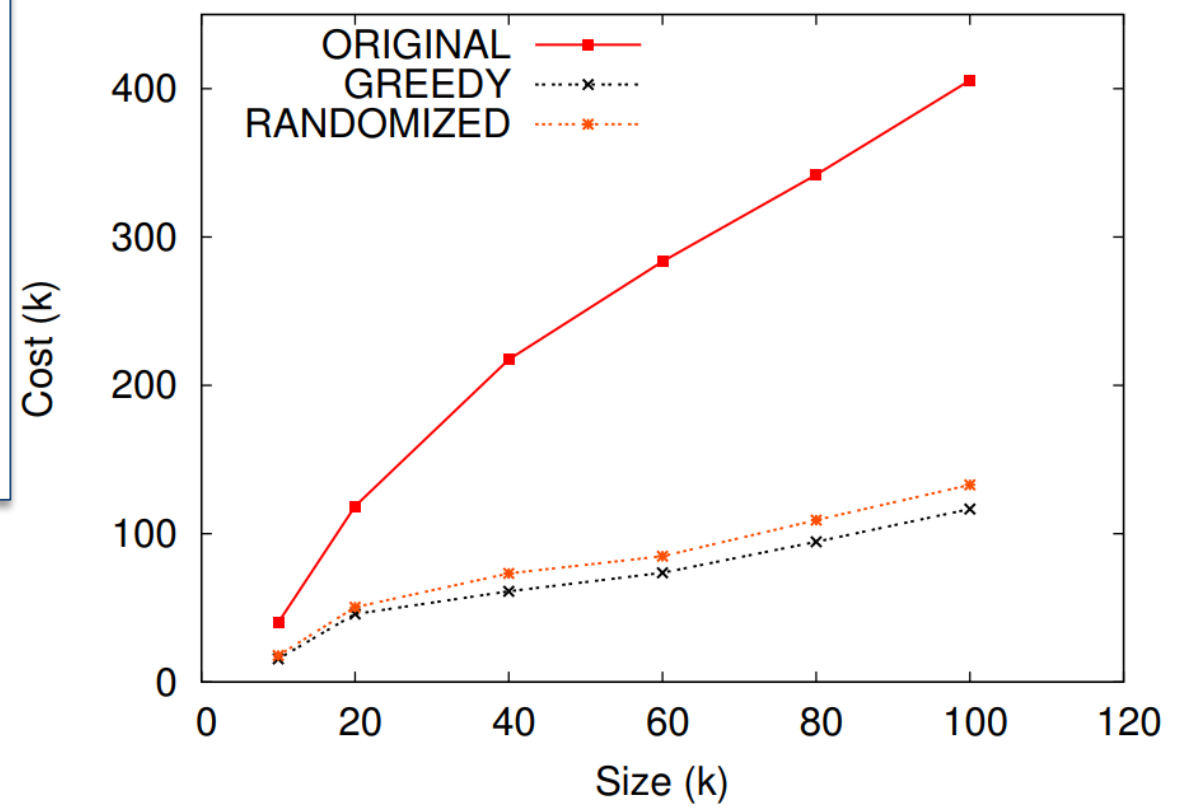

Figure 3: Comparison of costs of representations computed by GREEDY and RANDOMIZED on the CNR dataset.

5 genes related to a target drug:
TH1L, IL10, CD86,
IL17A, CYP3A4

Query genes
Conditions

5 genes related to a
target drug:
TH1L, IL10, CD86,
IL17A, CYP3A4

Observations

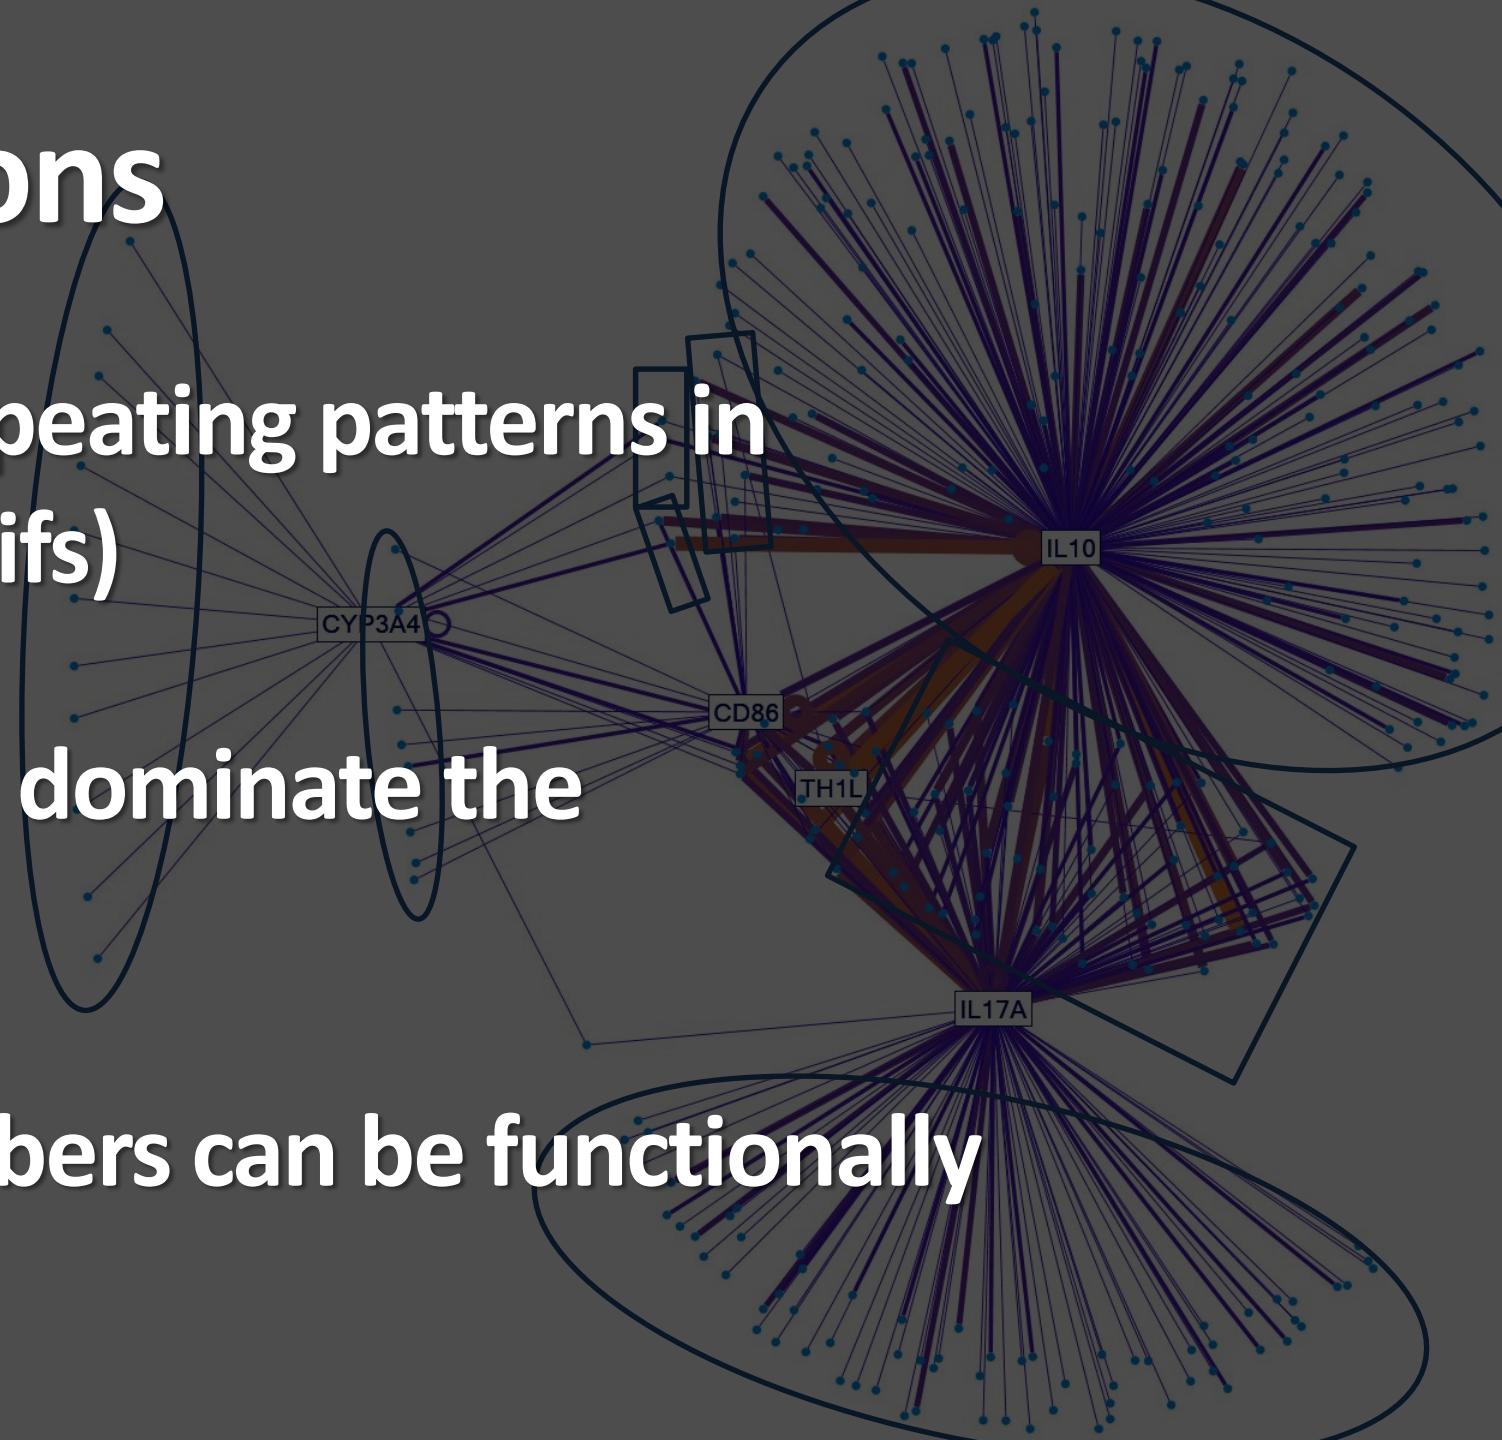

Query genes

Conditions

1: There are repeating patterns in networks (motifs)

2: Motifs often dominate the visualization

3: Motifs members can be functionally equivalent

Fan Motif

2-Connector Motif

Web Crawl

Controlled Experiment

- Participants: 2 pilot, 36 main
- Data: The Wiki, Senate, and Web networks
- Two groups: control and motif simplification
- 31 questions
- 45 minutes

Controlled Experiment - Tasks

Based on Lee et al. 2006 taxonomy:

- 1. Node count:** About how many nodes are in the network?
- 2. Cut point:** Which individual node would we remove to disconnect the most nodes from the main network?
- 3. Largest motif & size:** Which is the largest (fan | connector | clique) motif and how many nodes does it contain?
- 4. Labels:** Which node has the label “XXX”?
- 5. Shortest path:** What is the length of the shortest path between the two highlighted nodes?
- 6. Neighbors:** Which of the two highlighted nodes has more neighbors?
- 7. Common Neighbors:** How many common neighbors are shared by the two highlighted nodes?
- 8. Common Neighbors:** Which of these two pairs of nodes has more common neighbors?

Motif Simplification

- **Algorithms** for detecting fans, connectors, and cliques
- Publicly available **implementation in NodeXL**: nodexl.codeplex.com
- **Case studies** in political science, sociology, urban planning, medical informatics, intelligence analysis...
- **Controlled experiment** with 36 users showed that motif simplification improves user task performance
